Recognizing & Preventing Bed Bugs

Despite their name, bed bugs do not only live in beds. They can hitch a ride on passengers belongings and infest planes, trains, subways, buses, taxis and ships. Any residences with large numbers of occupants, such as hotels, motels, hospitals and other health care facilities, apartments, rooming houses, college dormitories and camp cabins, are prone to infestations. Bed bugs can spread through an entire building as they move from room to room and floor to floor.

An infestation can damage a Condominium, Hotel or Casino's image and reputation and it can be hard to recover a good reputation once it becomes tainted by a Bed Bug horror story. Since new cases of Bed Bugs have increased 500% over the last few years, an infestation is not something that should be taken lightly. Owners and guests want management to act responsively and they want the bugs eradicated! A good Bed Bug prevention program and knowing some of the telltale signs will help you recognize bed bugs and protect yourself, your belongings and the reputation of the establishment.

Beebe's has found that applying Bed Bug mattress encasements to your bedding not only helps treat and eliminate infestations, but it also helps to prevent Bed Bugs from infesting your mattress in the first place. This is only the first step in being proactive against the Bed Bug epidemic. Beebe's also finds that educating owners, management, housekeeping and staff plays a huge role that is required to prevent, detect and eliminate an infestation. If you have any questions concerning the bed bug epidemic or prevention methods call today and we can schedule a consultation.

BEEBE'S

Pest & Termite Control

As you may know we have had an influx of Bed Bugs into our Hotels, Casino and Condo industry. Many customers have reported on travel sites about the experience they have had with Bed Bugs at numerous upscale hotels. This can be a costly expense to overcome in an already unstable economy and industry.

Chemicals aren't always effective since bed bugs feed only on blood. Plus, it takes several visits to find and destroy all of the bugs and their eggs. Eradication of a full-blown infestation throughout a building could cost \$50,000 to \$60,000. Bed Bugs can live 12 months without a meal. Making a room off limits for weeks will not help! The Bed Bugs will still lurk in cracks no wider than an envelope, or a new batch may arrive in someone else's luggage one room over.

There's not one hotel, condo, or casino that wants their name or reputation associated with the fear of Bed Bugs in their rooms. The price of treating, litigation and the loss of business is enough to put most owners out of business. Bed Bug claims are among the top frauds perpetrated against hotels.

Insurance often fails to cover total litigation costs; for example, punitive damages are not insurable. Plus, if managers have been negligent in dealing with Bed Bug infestations, numerous insurers won't pay any claims. Bed Bug lawsuits have recently been filed against cruise lines, hotels, furniture rental companies, laundromats, and dry cleaners. There are actual websites that show you how to document and prepare your Bed Bug lawsuit.

For around a \$1 a day, per bed, for one year, you can have the preventive measure and education that will make detection and elimination easier when the problem arises. You can maintain your reputation for a Bed Bug free environment. For more information on treatment and prevention give me a call at 1-800-880-7096. We look forward to hearing from and helping you keep a safe and bug free environment for your customers.

Regards,

Ryan Beebe
